

Full Project Description

For my project, I created an app that helps people safely and anonymously report bullying, harassment, or discrimination. The name I came up with for it is called SpeakSafe, and it would mainly be used in middle schools, high schools, and colleges. In order for this app to work efficiently, they would have to use their student ID as a way to be allowed into their school's posting board. Administrators would also have their own login in but they have to be verified first by the creator. Then, the Administrators would sign students up first and put each student's ID in the database, and even though the administrators can put the ID in, all the students' posts will still be anonymous. This is mainly for safety because 1) you don't want a 40-year-old signing into this app to report bullying if they aren't even a part of any school, and 2) it's better for administrators to do it since they have all this information themselves and can do it quicker. Overall, this is the main idea of my app, and below I have a link to the actual app, but I really strongly advise you to watch the video first because I explain a few things that might be confusing lol :) I hope you like my app.

Video

The video is uploaded separately.
